WHAT SETS US APART?

Matrix Based Product Classification

Products and its corresponding variant's quality has to be in proper check and maintained well which is been done by our matrix based classification. It accurately classifies product's quantity based on its attributes. Many features like color, size, brand, season, garment type are established well.

Inventory Management

Accurate business decisions are made based on inventory management which tracks fast, slow moving products and their exact count. This ultimately weeds out assumptions about product count.

Customer Promotions

Promotions always strengthen customer relationship and boosts brand identity. There is need for many functions like bill busters, schemes, gifts/mobile/ e-vouchers, coupons, combo/bundle offers which play a significant role is boosting profits

Reports

Reports are the most significant tool for a solution which gives a live record of business performance. Sales, analysis, stock movements, size/color/style based reports, pivot table, audit reports, dashboard etc. adds value to an efficient clothing & apparel solution.
